PROFILE

I am a full-stack and mobile app developer with hands-on, real-world experience building and shipping production software — from Flutter mobile apps to full-stack ASP.NET Core systems deployed on live cloud infrastructure. I take projects end-to-end: designing the architecture, writing the code, debugging real production issues, and deploying to the Google Play Store and cloud hosting. I am comfortable working across the full stack — mobile, backend, databases, and AI integration — and I bring genuine curiosity for modern technologies like AI/LLMs and cloud platforms to every project I take on. I am looking for an opportunity to keep growing as an engineer while contributing real, shipped work to a professional team.

EXPERIENCE

Flutter Mobile App Developer — Digicon Valley

June 2026 – Present

Full-stack developer on a production employee workforce-attendance platform, owning both the Flutter mobile app and the ASP.NET Core backend — from architecture through deployment. Built geofenced attendance tracking, a real-time admin dashboard (SignalR), and an AI assistant using Google Gemini's function-calling API. Diagnosed and fixed real production bugs and deployed to the Google Play Store and a live PostgreSQL-backed backend on Railway.

SKILLS

Languages: Python, JavaScript, C++, C#, Dart, x86 Assembly

Tools & Frameworks: Flutter, Firebase (Cloud Messaging), ASP.NET Core, Entity Framework Core, PostgreSQL, SQL Server, SignalR, Docker, Railway (Cloud Deployment), Bootstrap, Git / GitHub, RESTful APIs

Concepts: OOP, Data Structures & Algorithms, Parallel Computing, Databases, REST Architecture, JWT & Cookie Authentication, Real-Time Systems, AI/LLM Integration (Function Calling)

Other: Problem Solving, Team Collaboration, Quick Learner, Code Documentation

PROJECTS

ScholarshipHive — Employee Attendance & Workforce Management Platform (Flutter + ASP.NET Core)

A production attendance system in active company-wide use — a Flutter mobile app paired with an ASP.NET Core backend. Features geofenced check-in/checkout, a real-time admin dashboard (SignalR) with analytics, an AI assistant powered by Google Gemini's function-calling API, and Firebase push notifications. Built with EF Core and PostgreSQL, deployed via Docker on Railway, published on the Google Play Store.

Mess Management System — Full-Stack Web App (ASP.NET Core 8)

Digitizes mess operations end-to-end — JWT authentication, role-based Admin/User dashboards, meal attendance tracking, digital wallet and payments, dynamic mess rates, menu management, complaints, and reports with automated background tasks. Built with ASP.NET Core 8 MVC and EF Core; migrated to PostgreSQL and independently deployed to production on Railway.

github.com/GhulamMustafaAnsari/Mess-Management-System

Deen Companion — Mobile App (Flutter)

A complete Islamic mobile app with Quran, Prayer Times, Hadith, Qibla, Tasbeeh, and an AI assistant. Built with Flutter and Firebase. Handles real users via direct APK distribution.

Dynamic Sports Score Card — Assembly Language

A scoreboard written in x86 Assembly (MASM). A hardware-level programming exercise that deepened my understanding of how software works at the machine level.

CERTIFICATIONS

Full Stack Developer — Internship Certificate

DecodeLabs

August 2026

EDUCATION

BS Computer Science

University of Engineering & Technology (UET), KSK Campus, Lahore | 2023 – 2027 (In Progress)

Intermediate — Computer Science (FSc)

Government College University (GCU), Lahore | 2023

Matriculation — Computer Science

Govt. Muslim High School, Saddar Cantt, Lahore | 2021

INTERESTS

- **Mobile app development** — how apps are designed, built, and shipped to real users.
- **Artificial Intelligence** — learning how AI and LLMs work and how to use them in projects.
- **Cloud platforms** — how modern apps are deployed, hosted, and scaled in production.
- **Open source** — reading real codebases to learn how experienced developers write software.
- **Industry trends** — staying updated with what technologies and tools companies are actually using today.

LANGUAGES

- **Urdu** — Native
- **English** — Proficient (reading, writing, and communication)
